### **City of Fort Worth Recognizes NT Window Land Redevelopment Efforts**

**November 4, 2020 – (Dallas Fort Worth)** – NT Window has been recognized and awarded Honorable Mention in the Land Redevelopment category at the City of Fort Worth Environmental Excellence Awards Ceremony held online, November 4<sup>th</sup> 2020.

The City of Fort Worth Environmental Excellence Awards recognizes innovation in waste reduction, recycling and water. The awards program began in 1999 as the Pretreatment Awards, honoring companies in full compliance with wastewater regulations. In 2019, the awards program added the Innovation Award and the Recognition Award that contain subcategories. Innovation Awards categories honor Land Redevelopment, Air Quality, Water Conservation, Stormwater, Water Use & Process Improvement, Solid Waste Reduction and Recycling. The Recognition Awards include Fort Worth Friendly Landscapes and the SmartWater Award.

The Land Redevelopment category recognizes successful land redevelopment efforts in the area. The new NT Window manufacturing facility is home of the former S&H Green Stamp distribution center built in 1958, located at 2900 West Seminary Drive. When purchased, NT Window committed to bring the building which had been vacant for almost a decade up to current energy and safety codes and fire, land and stormwater requirements. Plans included investment of at least \$5.6 million in total construction costs, plus land acquisition costs. This relocation of the headquarters for NT Window has brought immediate additional jobs to the area with additional opportunities planned for the next 12 months

The company renovated a historic, but abandoned and dilapidated property that decreased area home and commercial values and provided a spot for illegal activities to take place. “Our strategic selection of this property with the support of the City of Fort Worth, has allowed our company to invest in this community and become a cornerstone of new urban redevelopment of the Southside of Fort Worth. With our investment into this development project, we have been able to renovate this historic building back into a working, growing success, increasing local neighborhood home values, and reducing safety concerns and most importantly, bringing excitement to this community that has welcomed us with such positivity.” said Ryon Ray CEO of NT Window.

Heather Young, CFO added, “When we found the abandoned S&H Green Stamps building, we knew a lot of creativity, diligence, and time was needed to revitalize the building to make it our new NT home. We are grateful the City of Fort Worth has recognized our accomplishment and hard work by awarding us the Honorable Mention in the Land Redevelopment category of the Fort Worth Environmental Excellence Awards.”

NT Window custom produces more than 100,000 windows and doors per year at its Dallas/Fort Worth manufacturing plant with leading-edge solutions that set the standard

for high performance fenestration products – all window lines are designed to meet or exceed all performance requirements as established by the National Fenestration Rating Council (NFRC) and American Architectural Manufacturers Association (AAMA). NT Window is honored to have earned recognition as a City of Fort Worth Environmental Excellence Awards honoree in the Land Redevelopment category.
