Fort Worth, TX - NT Window is proud to announce the release of their new 1800 Series Impact Resistant Window for customers in severe weather areas and coastal applications. This innovative product combines the latest window design for thermal performance with an additional layer of safety for homeowners in the event of a storm, as the damaged glass will remain secure in the frame to keep homes and loved ones safe as well as protecting the remaining building envelope.

The 1800 Series has been tested at a third party, FGIA/AAMA-certified testing lab and meets the most stringent requirements for impact resistance. In fact, after being struck by an eight-foot long, nine-pound 2x4 at close proximity, the product remained in place with no breaches upon impact.

In addition to providing protection during severe weather and hurricanes, these impact resistant windows also offer enhanced noise insulation, block UV rays, and provide additional home security. They can also decrease heat transmission, lower energy bills year-round, and increase the overall value of a home. Plus, with the aligned multi-chamber frames, heavy-duty hardware, and impact resistant glass package, homeowners won't have to spend time installing unsightly shutters or plywood when a storm is approaching. A Narrowline picture window profile design was also achieved allowing a larger visible glass area so that homeowners can get the protection they need without sacrificing views or energy efficiency.

"We are thrilled to introduce our 1800 Series Impact Resistant Window to the market," said Ryon Ray, President and CEO of NT Window. "We believe this product offers homeowners the best in protection, performance, and design options within the Impact market and are confident in presenting this newest product choice to dealers and homeowners alike within the coastal markets."

The 1800 Series Impact window from NT comes in a variety of styles: Single Hung, Sliding, Casement, Geometric shapes and a Narrowline Picture Window with the Double Hung being offered spring of this year. As far as design options, the windows are offered in crème white and almond exterior colors plus light oak, dark oak and cherry woodgrain interiors; there are three grids styles offered as well as our popular Vividcolor Custom Coated Exterior colors.

In the United States, building codes generally require impact resistant windows in areas located in hurricane-prone regions, such as the Atlantic and Gulf coasts. These requirements may vary by state and local jurisdiction, so it is important to check with your local building code authority to determine if impact resistant windows are required for your area.

The 1800 Series Impact Resistant Window is available in a variety of styles and design options to suit the unique needs and preferences of homeowners. For more information, visit [ntwindow.com/impactwindow](https://ntwindow.com/impactwindow).
